

Windows Installation of WDD Wallet

Download the installer from <http://64.19.211.41/wdd/WddWalletSetup.exe> to your download folder. Launch WddWalletSetup.exe, and follow the prompts.

Note: As part of the wallet installation it will install VirtualBox. Accept all the defaults, but when you are offered the option to run VirtualBox at the end of the installation, uncheck the box.

The last page of the installer will offer to run Wallet.exe. Keep the box checked and it will start the wallet automatically.

The first time it runs, it will take some time to initialize. Please be patient.

When it prompts to seed the chain, accept the default location. The wallet will automatically assign you a unique address. This is like your account number. You receive and send using your address.

When you see your address and your QR code, you are ready to accept WDD and Vouchers.

Verifying integrity of your Windows install download

Because of the value of crypto, some attempts have been seen to trick people into installing compromised software. We are not aware of any attempts to do so with this wallet, however, we provide an MD5 and SHA256 checksum that lets you verify the installer. Obtain the checksums from <http://wdd/checksums.txt>

Use these commands in a command prompt (on Windows) to verify the checksum. Verifying one is enough. Replace with the filename of your download.

```
certutil -hashfile <file> md5  
certutil -hashfile <file> sha256
```

Linux Installation of WDD Wallet

Download the installer from <http://64.19.211.41/wdd/wdd-wallet-linux-x64.tar.gz> for 64-bit

Extract with: `tar -xzvf wdd-wallet-linux-x64.tar.gz`

From the newly created wddwallet folder, run:

```
sudo sh install.sh
```

You may be prompted for your password.

To run the wallet:
`wdd-wallet`

The first time the wallet runs, it will take some time to initialize. Please be patient.

When it prompts to seed the chain, accept the default location. The wallet will automatically assign you a unique address. This is like your account number. You receive and send using your address.

When you see your address and your QR code, you are ready to accept WDD and Vouchers.

Verifying integrity of your linux download

Because of the value of crypto, some attempts have been seen to trick people into installing compromised software. We are not aware of any attempts to do so with this wallet, however, we provide an MD5 and SHA256 checksum that lets you verify the installer. Obtain the checksums from http://64.19.211.41/wdd/checksums_linux.txt

```
md5sum <file>
```

```
sha256sum <file>
```

Receiving Vouchers or WDD

For others to send WDD or Assets to you, they will need your address.

You can give them the address text string which looks like this:

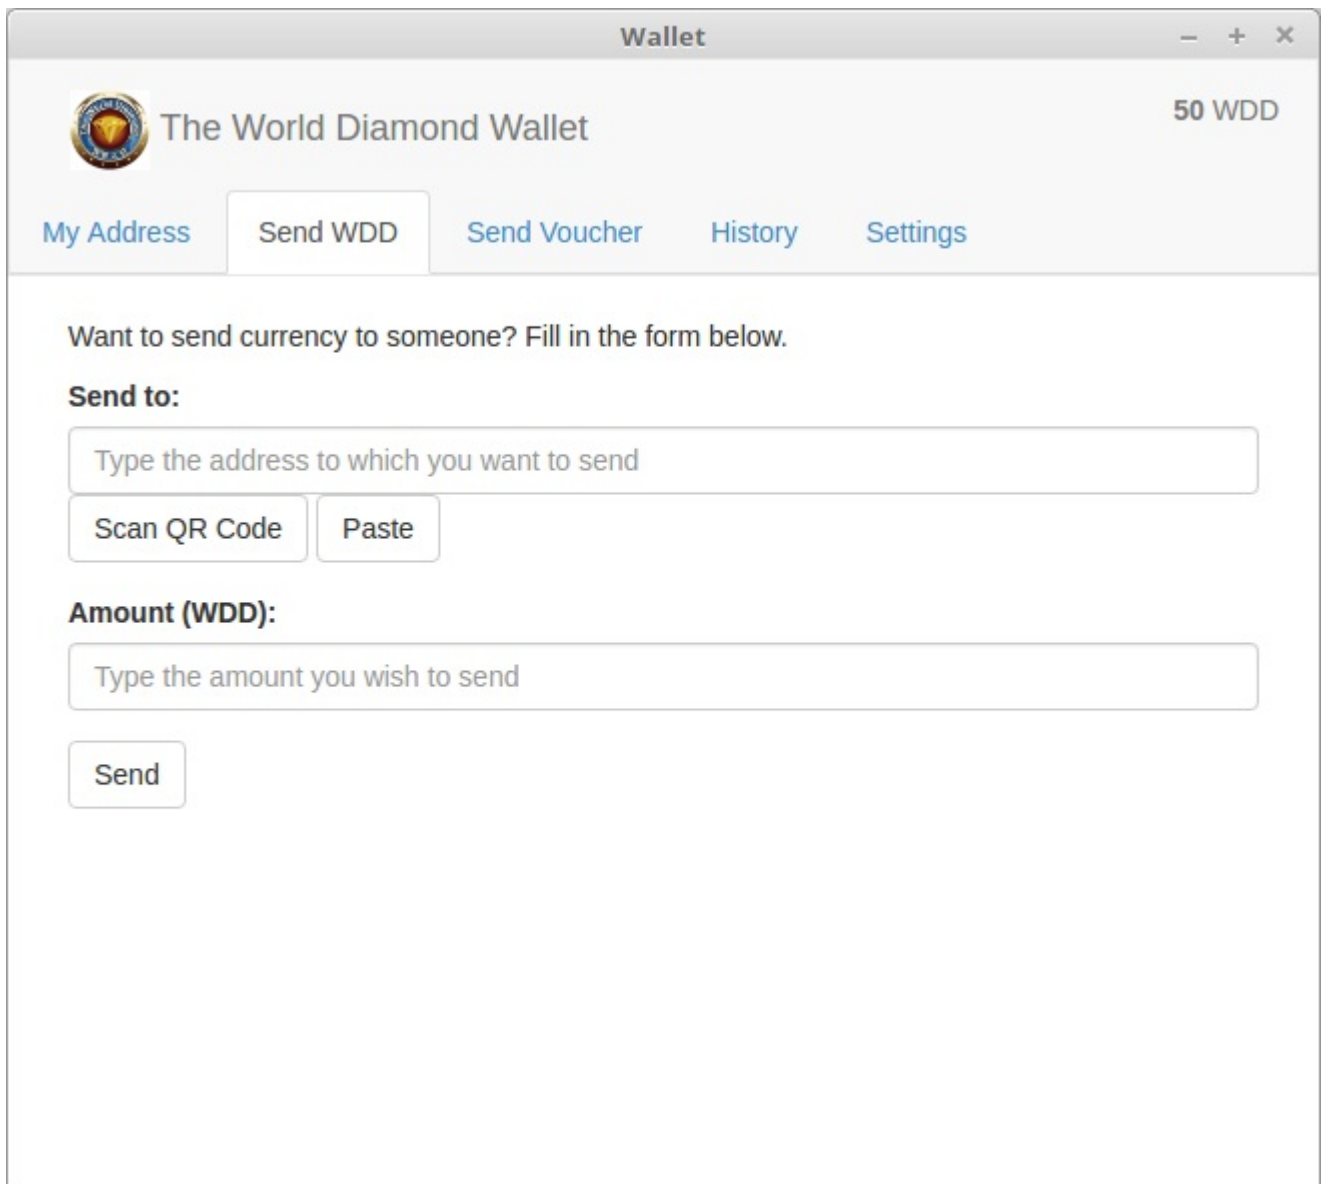

wUCS7Qy9YzoQt1Np4XEqHVDhMGnpCSECEcWKtd

Or let the recipient scan the QR Code with their phone.

You can copy/paste the address or qr code from the application to an e-mail.

Sending WDD

To send WDD to others.

The screenshot shows a web application window titled "Wallet". The header includes a logo for "The World Diamond Wallet" and a balance of "50 WDD". Below the header is a navigation bar with five tabs: "My Address", "Send WDD" (which is selected), "Send Voucher", "History", and "Settings". The main content area of the "Send WDD" tab contains the following elements:

- A text prompt: "Want to send currency to someone? Fill in the form below."
- A section header: "Send to:"
- A text input field with the placeholder text "Type the address to which you want to send".
- Two buttons below the input field: "Scan QR Code" and "Paste".
- A section header: "Amount (WDD):"
- A text input field with the placeholder text "Type the amount you wish to send".
- A "Send" button located below the amount input field.

Paste their address into **Send to:** This is like their account number. If you have their QR code, and your computer has a camera, then hit [Scan QR Code] to allow the camera to see the QR code image. If it is a valid address, it will be recognized automatically and entered for you.

Enter the amount you wish to send, and hit [Send].

If you are connected to the internet, the WDD will be sent. It will usually show up very quickly, but may take several minutes before it can be spent by the recipient.

Sending a Voucher

To send a voucher.
